

ABSTRACT OF THE DISCLOSURE

A pet litter collection bag and spatula which comprises a flexible walled bag which has a closed end and an open end. At the closed end is mounted a spatula with a graspable handle of the 5 spatula extending within the confines of the internal compartment of the bag. The spatula is thin and bendable so as to be manually deformable to accommodate to the shape of the terrain on which it is being used to scoop up the pet litter. Once the pet litter is located on the spatula, the bag is reversed in position enclosing 10 the front portion of the spatula with the open end of the bag to be tied to a closing position.
